ENGINEERED WIDE PLANK FLOORING

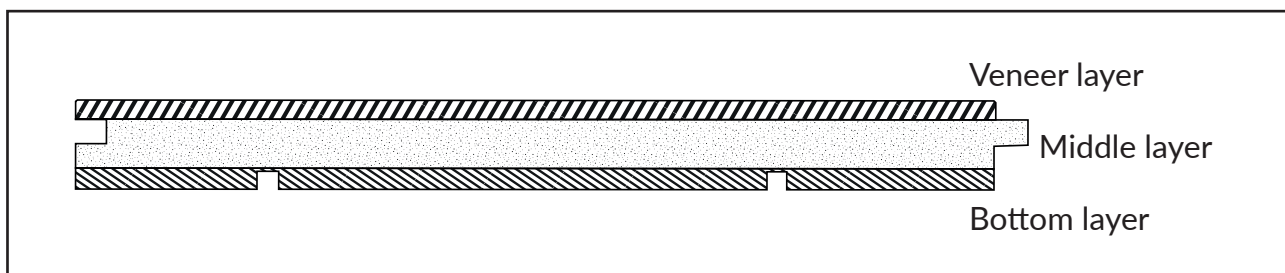

ENGINEERED WIDE PLANK FLOORING

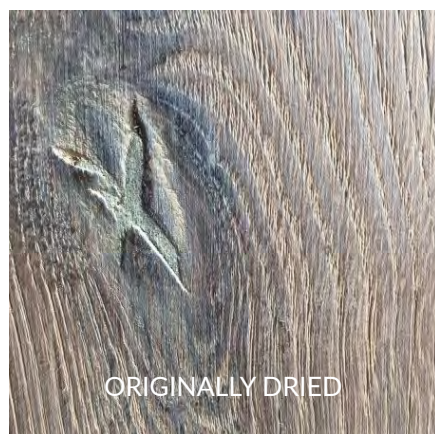

Select engineered wide planks by Hiram are your perfect alternative to solid planks due to their suitability for low level floor installation heights and reduced movements when installed on floor heating systems.

Made up of three layers, the selected veneer layer is pressed together with a middle and a reverse bottom layer, the engineered planks prove to have great dimensional stability throughout the year.

Just like we do with the solid wide planks, we produce the engineered planks in extraordinary lengths up to 15 m and widths between 200 and 400 mm.

	Strengths	Widths	Lengths
Douglas	17 19 21 mm	200 250 300 400 mm	1 - 15 m
Oak	17 19 21 mm	200 250 300 400 mm	1 - 10 m
Silver Fir	17 19 21 mm	200 250 300 mm	1 - 10 m
